

Ex No: 1

Comparative study of low code development versus traditional application development approaches

Aim:

To compare traditional application development and low code application development based on their features, advantages and disadvantages.

Features of traditional vs low code:

<u>Traditional Development</u>	<u>Low-code Development</u>
⇒ Required programming knowledge	⇒ Minimal coding Required
⇒ Developed using languages like Java, Python, C#, etc.	⇒ uses drag and drop interface
⇒ longer development time	⇒ faster development time
⇒ High flexibility and customization	⇒ limited customization
⇒ Suitable for complex application	⇒ Suitable for simple to medium business application

Advantage of traditional vs low code:

Traditional Development:

- ⇒ Highly customizable
- ⇒ Suitable for large and complex projects.
- ⇒ Better control over application design and performance

low code Development:

- => Faster application development
- => Required less coding knowledge
- => Reduces development cost
- => Easy maintenance and updates.

Disadvantages of traditional vs low code:

Traditional Development:

- => Time consuming
- => Requires skilled developers
- => Higher development and maintenance cost
- => longer testing and deployment process

low code Development:

- => limited customization option
- => vendor dependency
- => May not be suitable for highly complex application.
- => licensing costs for enterprise platforms

Comparison of traditional vs low code:

Traditional Development	Low code development
⇒ Takes more time to develop applications.	⇒ Develops applications much faster.
⇒ Requires Strong programming Skills	⇒ Requires little or no programming knowledge
⇒ Highly flexible and customizable	⇒ Limited customization options
⇒ Higher development & maintenance cost	⇒ Lower development & maintenance cost.

Result:

Traditional development offers high flexibility and customization, while low-code development enables faster application development with minimal coding. The suitable approach depends on the project requirements.
